9 december 2014

Het onderhavige rapport is opgesteld door Enviro Challenge bedrijfsadviseurs in opdracht van Gemeente Bernheze in het kader van het door Provincie Noord-Brabant gesubsidieerde NIMBY-project.

auteur : Johan Put

projectassistentie : Greet Daniels, Kurt Van Rompaey en Sander Kuipers

1

Inleiding

samenvatting

De onderhavige verspreidingsberekening geeft een inzicht in de impact van de gewenste activiteiten van Gebr. Dijkhoff bv op de concentratie van NO₂ (stikstofdioxide) in de omgevingslucht, een stof die met name in hoge concentraties schadelijk is voor mens, flora en fauna.

achtergrond

Gebr. Dijkhoff bv wenst de bedrijfsactiviteiten aan te passen aan de marktontwikkelingen en zich te ontdoen van de NIMBY-status door de bedrijfsinrichting aan de Heeswijkseweg in harmonie te brengen met het landschap en de omgeving middels een wijziging van het bestemmingsplan en de omgevingsvergunning (Wabo). Met dit initiatief, dat deel uitmaakt van een integraal plan genaamd "Heeswijkse Aa-beemden", beoogt het bedrijf op de transities in de bouwsector in te spelen, effecten op de omgeving te minimaliseren, sociale en bedrijfsdoelstellingen te realiseren en het voortbestaan van het familiebedrijf te garanderen.

aanleiding

Door de ontwikkelingen van de bedrijfsactiviteiten van Gebr. Dijkhoff bv zal ook de verkeersaantrekkende werking van het bedrijf wijzigen. Dit heeft als gevolg dat de emissie van uitlaatgassen eveneens zal toenemen, hetgeen de aanleiding tot het voorliggende rapport vormt.

NO₂ of stikstofdioxide is een verbinding van zuurstof (O) en stikstof (N). Stikstofoxiden (NO_x) ontstaan bij verbranding op hoge temperatuur, bijvoorbeeld in een verbrandingsmotor. Stikstofoxiden kunnen in hoge concentraties negatieve effecten hebben op mens, flora en fauna, namelijk irritaties van de ogen, keel en neus alsook astma-aanvallen. De gewenste bedrijfssituatie van Gebr. Dijkhoff bv geeft geen aanleiding tot hoge concentraties. Echter, in lage concentraties veroorzaken stikstofoxiden deels ook een "moeraseffect" en een verzuring van het milieu.

doel

Het doel van de onderhavige verspreidingsberekening is aantonen dat de toename van NO₂ in de omgevingslucht ten gevolge van de gewenste bedrijfsactiviteiten niet leidt tot een overschrijding van de vigerende eisen.

leeswijzer

Het onderhavige rapport belicht na deze inleiding de wetgeving en het beleid betreffende NO₂ in hoofdstuk 2 en de (gewenste) bedrijfssituatie in hoofdstuk 3. Verder geeft hoofdstuk 4 een omschrijving van de bronnen en hoofdstuk 5 van het rekenmodel waarmee in hoofdstuk 6 de resultaten zijn berekend. Tenslotte biedt hoofdstuk 7 de conclusie van het voorliggende rapport, waarna een samenvatting en een bijlage volgen.

2

Wetgeving en beleid

samenvatting

Volgens de Wet milieubeheer zijn aangaande NO₂ twee grenswaarden relevant. De jaargemiddelde concentratie mag 40 µg/m³ niet overschrijden en het aantal overschrijdingen per jaar van het urgемiddelde van de waarde 200 µg/m³ mag niet hoger zijn dan 18 uren.

Wet milieubeheer

**FINAL DRAFT
AKKOORD
BEVONDEN
DOOR ODM**

In bijlage 2 bij de Wet milieubeheer worden wettelijke luchtkwaliteitseisen genoemd voor luchtverontreinigende stoffen. Van de lijst met stoffen zijn voor de onderhavige inrichting PM10 (fijn stof) en NO₂ (stikstofdioxide) relevant. In het onderhavige rapport wordt NO₂ behandeld. PM10 komt in een afzonderlijk rapport aan bod, namelijk in het rapport "NIMBY Heeswijkse Aa-beemden - Verspreidingsberekening PM10" van Enviro Challenge.

Volgens de Wet milieubeheer dienen de grenswaarden voor de stoffen in acht te worden genomen, uitgezonderd de arbeidsplaats zoals bedoeld in de Arbeidsomstandighedenwet uit 1998. Volgens de laatstgenoemde wet wordt daaronder verstaan "iedere plaats die in verband met het verrichten van arbeid wordt of pleegt te worden gebruikt". Dit betekent dat de door de inrichting veroorzaakte luchtimmissie ten gevolge van de aangevraagde activiteiten op ieder willekeurig punt buiten de grenzen van de inrichting dient te worden getoetst. De te toetsen concentratie bestaat uit de som van het ter plaatse heersende achtergrondniveau en de bijdrage van de aangepaste activiteiten.

grenswaarden NO₂

Voor NO₂ zijn volgens de Wet milieubeheer (zie bijlage 2, paragraaf 2) twee grenswaarden relevant, namelijk :

- jaargemiddelde concentratie : 40 µg/m³; en
- aantal overschrijdingen per jaar van het urgемiddelde van de waarde 200 µg/m³ : 18 uren.

3

Bedrijfssituatie

De bedrijfssituatie is uitvoerig beschreven in het rapport “NIMBY Heeswijkse Aa-beemden - Activiteiten” van Enviro Challenge.

4

Bronbeschrijving

samenvatting

De NO₂-bronnen ten gevolge van de gewenste activiteiten worden gecombineerd met emissiekengetallen om zo te komen tot NO₂-emissies. Het gaat met name over het overslaan en bewerken van materialen en stoffen, alsmede over verkeersbewegingen.

bronnen

De NO₂-bronnen ingevolge de gewenste activiteiten en de bijbehorende emissiekengetallen per eenheid brandstof vormen een belangrijk uitgangspunt voor de hiernavolgende berekeningen. Verder in dit hoofdstuk volgt een tabel over twee pagina's met de relevante NO₂-bronnen.

oppervlaktebronnen

Alle in de tabel genoemde bronnen, met uitzondering van de verkeersbronnen, zijn oppervlaktebronnen omwille van de volgende redenen :

- De genoemde bronnen, inclusief de zeef- en breekinstallatie, worden gekenmerkt door ruimtelijke uitgestrektheid.
- In het rapport "Inventarisatie Microstof van Megarecycling" (bron : Janssen, G. en Put, J. : Managementnotitie "Inventarisatie Microstof van Megarecycling", Enviro Challenge, Eindhoven, 31 december 2008), waarin PM10-emissiekengetallen zijn bepaald aan de hand van immissiemetingen, zijn deze bronnen ook oppervlaktebronnen.
- De controle van de berekening door het bevoegd gezag is overzichtelijker en eenvoudiger als één oppervlaktebron wordt gekozen in plaats van bijvoorbeeld vijftig puntbronnen naast elkaar.
- Volgens de website van InfoMil geeft de handreiking van het Nieuw Nationaal Model II het volgende aan : *"Bij receptorpunten op grotere afstand van de bron geeft een oppervlaktebron bij benadering dezelfde immissies als een puntbron."*

kengetallen

Het verspreidingsmodel Geomilieu rekent met kengetallen voor NO_x en leidt daaruit de waarde voor NO₂ af. Daarom zijn in de hiernavolgende tabel het kengetal voor NO_x en het gehalte NO₂ in NO_x weergegeven.

AdBlue

Gebr. Dijkhoff bv werkt gedeeltelijk met diesel waaraan AdBlue wordt toegevoegd. AdBlue is een gedeponeerde handelsnaam voor AUS32, een oplossing bestaande uit 32,5 % ureum en 67,5 % gedemineraliseerd water die wordt gebruikt als toevoeging aan diesel. Het middel wordt in de hete uitlaatgassen ingespoten vóór een speciale katalysator. De bij de verbranding gevormde stikstofoxiden worden in elementair stikstof en water omgezet, waardoor minder stikstofoxiden worden uitgestoten. In de verspreidingsberekening is met de toevoeging van AdBlue geen rekening gehouden. In de toekomst zal het bedrijf ernaar streven zoveel mogelijk vrachtwagens op een mengsel van diesel en AdBlue te laten rijden.

verkeersbewegingen per as

In het verspreidingsmodel Geomilieu wordt voor de verkeersbewegingen gerekend met de "emissiekengetallen wegverkeer" van de Nederlandse overheid. De bewegingen vertegenwoordigen de verkeersaantrekende bewegingen die door de inrichting worden veroorzaakt.

Ter zake zijn de volgende aannames gemaakt :

- Alle verkeersbewegingen gebeuren met vrachtwagens van 25 à 30 ton;
- Bronnen 11 tot en met 15 en bron 17 (= alle transportafstanden buiten de inrichting) zijn opgevat als een lijntraject van ongeveer één kilometer buiten de inrichting in vier verschillende richtingen (transport naar noorden, oosten, zuiden en westen); en
- Bron 16 (= intern verkeer) is als een lijntraject opgevat.

intermodaal transport

Gebr. Dijkhoff bv onderzoekt de mogelijkheid om in de toekomst gedeeltelijk met intermodaal transport te gaan werken. Bij intermodaal transport worden verschillende transportmiddelen gecombineerd. Bouw- en afvalstoffen kunnen met vrachtwagens dan wel met schepen worden aan- en afgevoerd. Verwacht wordt dat een vervanging van 20 % van het transport per as door transport over water (vanuit een nog te realiseren langshaven) een reducerend effect op de emissie van NO₂ heeft. Daarom zijn de berekeningen uitgevoerd voor het scenario met alleen vrachtwagenbewegingen (= worstcasescenario).

transportband

Indien een transportband wordt gebruikt om materialen en stoffen te vervoeren over de N279 naar een langshaven aan de Zuid-Willemsvaart, dan is dit een elektrisch aangedreven transportband waardoor geen bijkomende NO₂-emissie wordt veroorzaakt. Wel wordt een extra kraan aan de langshaven geplaatst.

werkdagen

De onderstaande emissiefactoren zijn op basis van een vijfdagenweek opgesteld. Hoewel Gebr. Dijkhoff bv incidenteel activiteiten uitvoert op zaterdagen, is in de onderhavige verspreidingsberekening gekozen voor een werkweek van vijf werkdagen. Dit heeft als gevolg dat de activiteiten over minder dagen worden gespreid en bijgevolg de emissiefactoren hoger zijn, waardoor een “worst case” wordt berekend.

additioneel transport N279

Naar aanleiding van de “Burendenktaak” die op 22 juli 2014 ten kantore van Enviro Challenge is gehouden, is een extra bron aan het model toegevoegd die *niet* aan het bedrijf is gerelateerd. Gebr. Dijkhoff bv is derhalve niet verantwoordelijk voor deze extra bron. Het betreft het additionele transport ten gevolge van de verbreding van de N279, met name 7.100 bijkomende verkeersbewegingen per dag.

worstcasescenario

Op grond van meerdere redenen kan de voorliggende berekening als een “worstcasescenario” worden beschouwd. De belangrijkste zijn :

- Het gebruik van AdBlue wordt niet in de berekening meegenomen;
- Het model houdt geen rekening met eventueel intermodaal transport;
- Met exceptionele werkweken van zes werkdagen wordt geen rekening gehouden, waardoor de activiteiten in het rekenmodel in minder dagen worden uitgevoerd dan in werkelijkheid. Bijgevolg is de emissie in het rekenmodel hoger dan in werkelijkheid;
- In het model is bijkomend een bedrijfsexterne bron opgenomen, namelijk de toename van het wegverkeer op de N279 tussen 2014 en 2025;
- Voor alle bronnen zijn telkens de *maximale* hoeveelheden in rekening gebracht.

| NO ₂ -bron (zie rapport "NIMBY Heeswijkse Aa-beemden - Activiteiten" van Enviro Challenge) | | hoeveelheid | kengetal NO _x | dieselverbruik | spreiding over het jaar | emissie NO _x | NO ₂ /NO _x |
|---|---|----------------------------|---------------------------------|----------------|-------------------------|----------------------------------|----------------------------------|

informatiebronnen
en aannames

FINAL DRAFT :
AKKOORD :
BEVONDEN
DOOR ODBN

De cijfers in superschrift bij de waarden uit de tabel verwijzen naar de volgende informatiebronnen en aannames :

- (1) De totale overslaghoeveelheid van alle lijnen samen, met name de BSA-lijn (200.000 ton), de samenstellingslijn (270.000 ton), de bouwmaterialen / zand / grond / grind-lijn (220.000 ton), de sorteerlijn (30.000 ton) en de procesloze lijn (16.000 ton) bedraagt 736.000 ton. De volgende hoeveelheden worden echter niet meegerekend : 400 ton additieven (samenstellingslijn), 18.000 ton aanmaakwater (samenstellingslijn) en 1.000 ton asbesthouderende materialen (procesloze lijn). Bijgevolg wordt gerekend met een overslaghoeveelheid van 716.600 ton (zie rapport "NIMBY Heeswijkse Aa-beemden - Activiteiten" van Enviro Challenge). De overslag gebeurt op twee locaties binnen het bedrijf. Aan de noordzijde van het terrein wordt 200.000 ton overgeslagen. Deze hoeveelheid houdt verband met enerzijds niet-verontreinigde grond, grond van onbekende kwaliteit en bouwstoffen, en anderzijds gekeurde grond en bouwstoffen. De overige 516.600 ton wordt aan de oostzijde van het terrein overgeslagen.
- (2) Het aantal vrachten naar en van de inrichting wordt in het rapport "NIMBY Heeswijkse Aa-beemden - Verkeer" van Enviro Challenge onderbouwd. Aangenomen wordt dat 50 % van de vrachtwagens een retourvracht inhoudt.
- (3) Onderzoek wijst uit dat ter hoogte van Heeswijk de verkeersintensiteit per etmaal zal stijgen van 25.700 tot 32.800 motorvoertuigen. Op jaarbasis zijn dit derhalve 2.591.500 extra verkeersbewegingen. Bron : Provincie Noord-Brabant : 'Provinciaal Inpassingsplan N279 's-Hertogenbosch - Veghel (NL.IMRO.9930.ipN279-va01)', Provincie Noord-Brabant, <http://ro.brabant.nl/AEA18C17-3DCE-4462-A4DF-574005952906/t_NL.IMRO.9930.ipN279-va02_Paragraaf2.2.html> (geraadpleegd op 8 september 2014)
- (4) Centraal Bureau voor de Statistiek (CBS) : 'Luchtverontreiniging, feitelijke emissies door mobiele bronnen', Centraal Bureau voor de Statistiek, <<http://statline.cbs.nl/StatWeb/publication/?DM=SLNL&PA=7062&D1=13&D2=19&D3=20-22&VW=T>> (geraadpleegd op 8 mei 2014)
- (5) Eén liter diesel heeft een massa van 0,845 kg.
- (6) In de internationale literatuur wordt geen eenduidig cijfer voor de verhouding van NO₂ ten opzichte van NO_x genoemd. Afgaande op verschillende studies, waarin getallen van 5,6 tot 12,7 % NO₂/NO_x worden genoemd, is besloten een waarde van 10 % aan te houden.

5

Rekenmodel

samenvatting

Om de verspreiding van NO₂ te berekenen, is in het voorliggende rapport gebruikgemaakt van het verspreidingsmodel Geomilieu.

Geomilieu

De berekeningen in het onderhavige rapport zijn uitgevoerd met behulp van het verspreidingsmodel Geomilieu v2.60 (64-bit), module Luchtkwaliteit - Stacks (KEMA Stacks + versie 2014.1 / PreSRM 1.4.0.2).

input

De in hoofdstuk 4 genoemde bronnen vormen de input van het model, samen met de hiernavolgende locatiegerelateerde opties :

- toetsjaar : 2014
- rekenperiode : 1 januari 1995 tot 31 december 2004
- meteo referentiepunt station : X = 159.887,70 en Y = 406.067,60
- terreinruwheid : gebaseerd op modelgebied
 - X_{min} = 158.000 // X_{max} = 162.000
 - Y_{min} = 404.000 // Y_{max} = 408.000
- zeezoutcorrectie : ja
- rekengrid : 1.250 m x 850 m
- intervallen : 25 m x 25 m

keuze intervallen

Gekozen is voor intervallen van 25 m omdat het terrein dusdanig homogeen is dat binnen deze intervallen door de homogeniteit geen verschillen bestaan, zoals bijvoorbeeld aanwezigheid van woningen, scholen, verzorgingstehuizen, ziekenhuizen en openluchtsportinfrastructuur.

Rekenresultaten

samenvatting

Uit de “worst case”-verspreidingsberekening kan worden geconcludeerd dat noch de grenswaarde van de jaargemiddelde concentratie, noch de immissie-eis betreffende het aantal overschrijdinguren op enig punt buiten de inrichting wordt overschreden.

PIP N279

De volgende percelen (kadastraal nummer, eigenaar) worden gemaanvoerd in het kader van het Provinciaal inpassingsplan (PIP) N279 met nummer NL.IMRO.9930.ipN279, onherroepelijk verklaard op 27 augustus 2014 :

- tankstation (HWK02E 01925G0000, Provincie Noord-Brabant);
- autohandel Kanaaldijk 26 (HWK02E 01814G0000, J.A.I. Vorstenbosch);
- woning Heeswijkseweg 2 (HWK02E 02119G0000, H.G.C.M. van Oorschot);
- woning Kanaaldijk 18 (HWK02E 02087G0000, Provincie Noord-Brabant);
- horecazaak Kanaaldijk 14 (HWK02E 01747G0000, N.P.A. Ploegmakers);
- woning Kanaaldijk 12 (HWK02E 01950G0000, Provincie Noord-Brabant).

figuren

De hiernavolgende paragrafen bevatten twee figuren. Een eerste figuur geeft (paragraaf 6.1) de contourlijnen voor de jaargemiddelde concentratie (immissie) van NO₂ weer, de tweede figuur (paragraaf 6.2) geeft de contourlijnen voor het aantal overschrijdingen per jaar van het urgемiddelde weer. In de figuren is de “worst case” weergegeven.

journaalbestanden

In bijlage 1 bij het onderhavige rapport zijn de journaalbestanden van GeoMilieu opgenomen.

jaargemiddelde concentratie

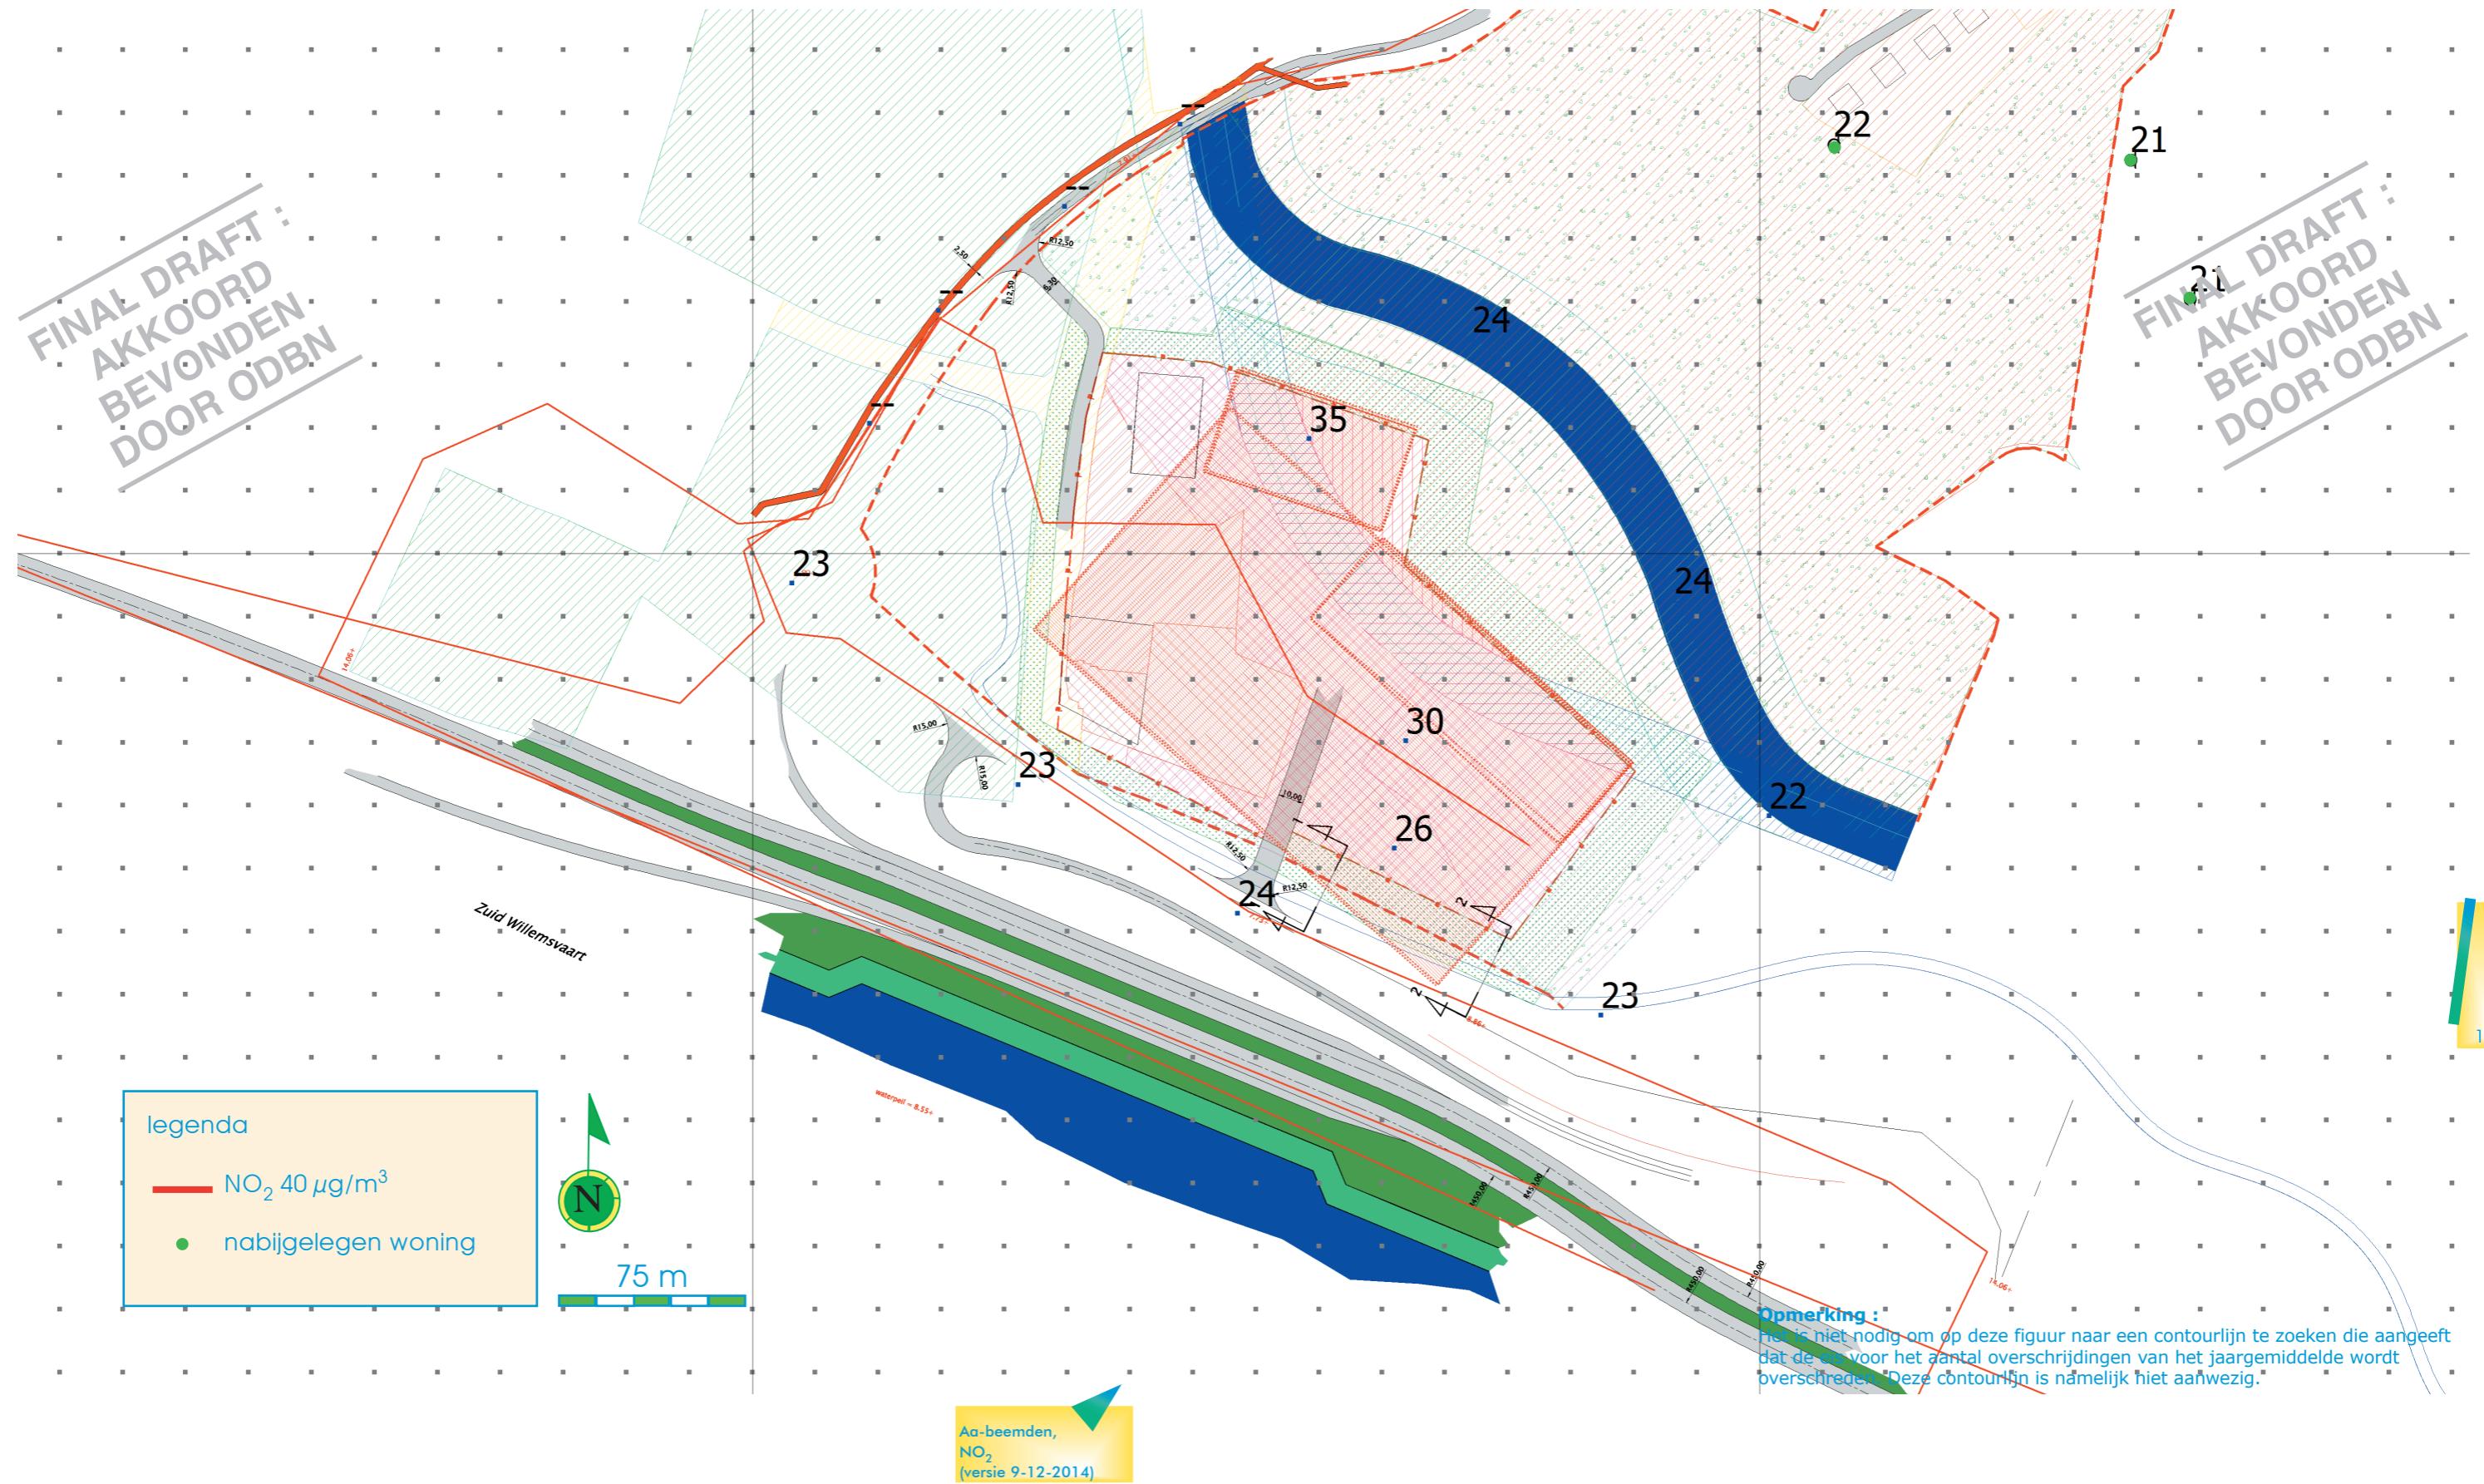

Figuur 6.1 toont aan dat de jaargemiddelde concentratie NO₂ op elk punt buiten de inrichting, dus ook ter hoogte van de dichtstbijzijnde woningen (zowel reeds gerealiseerd als gepland op de publicatiедatum van het onderhavige rapport) minder bedraagt dan 30 µg/m³ en dus ruim onder de wettelijke eis van 40 µg/m³ blijft.

aantal overschrijdingsdagen

Uit figuur 6.2 kan worden vastgesteld dat de urgемiddelde concentratie NO₂ op geen enkel moment hoger ligt dan 200 µg/m³. Het aantal overschrijdinguren is bijgevolg 0 en blijft dus op elk punt buiten de inrichting onder de wettelijke eis van 18 uren.

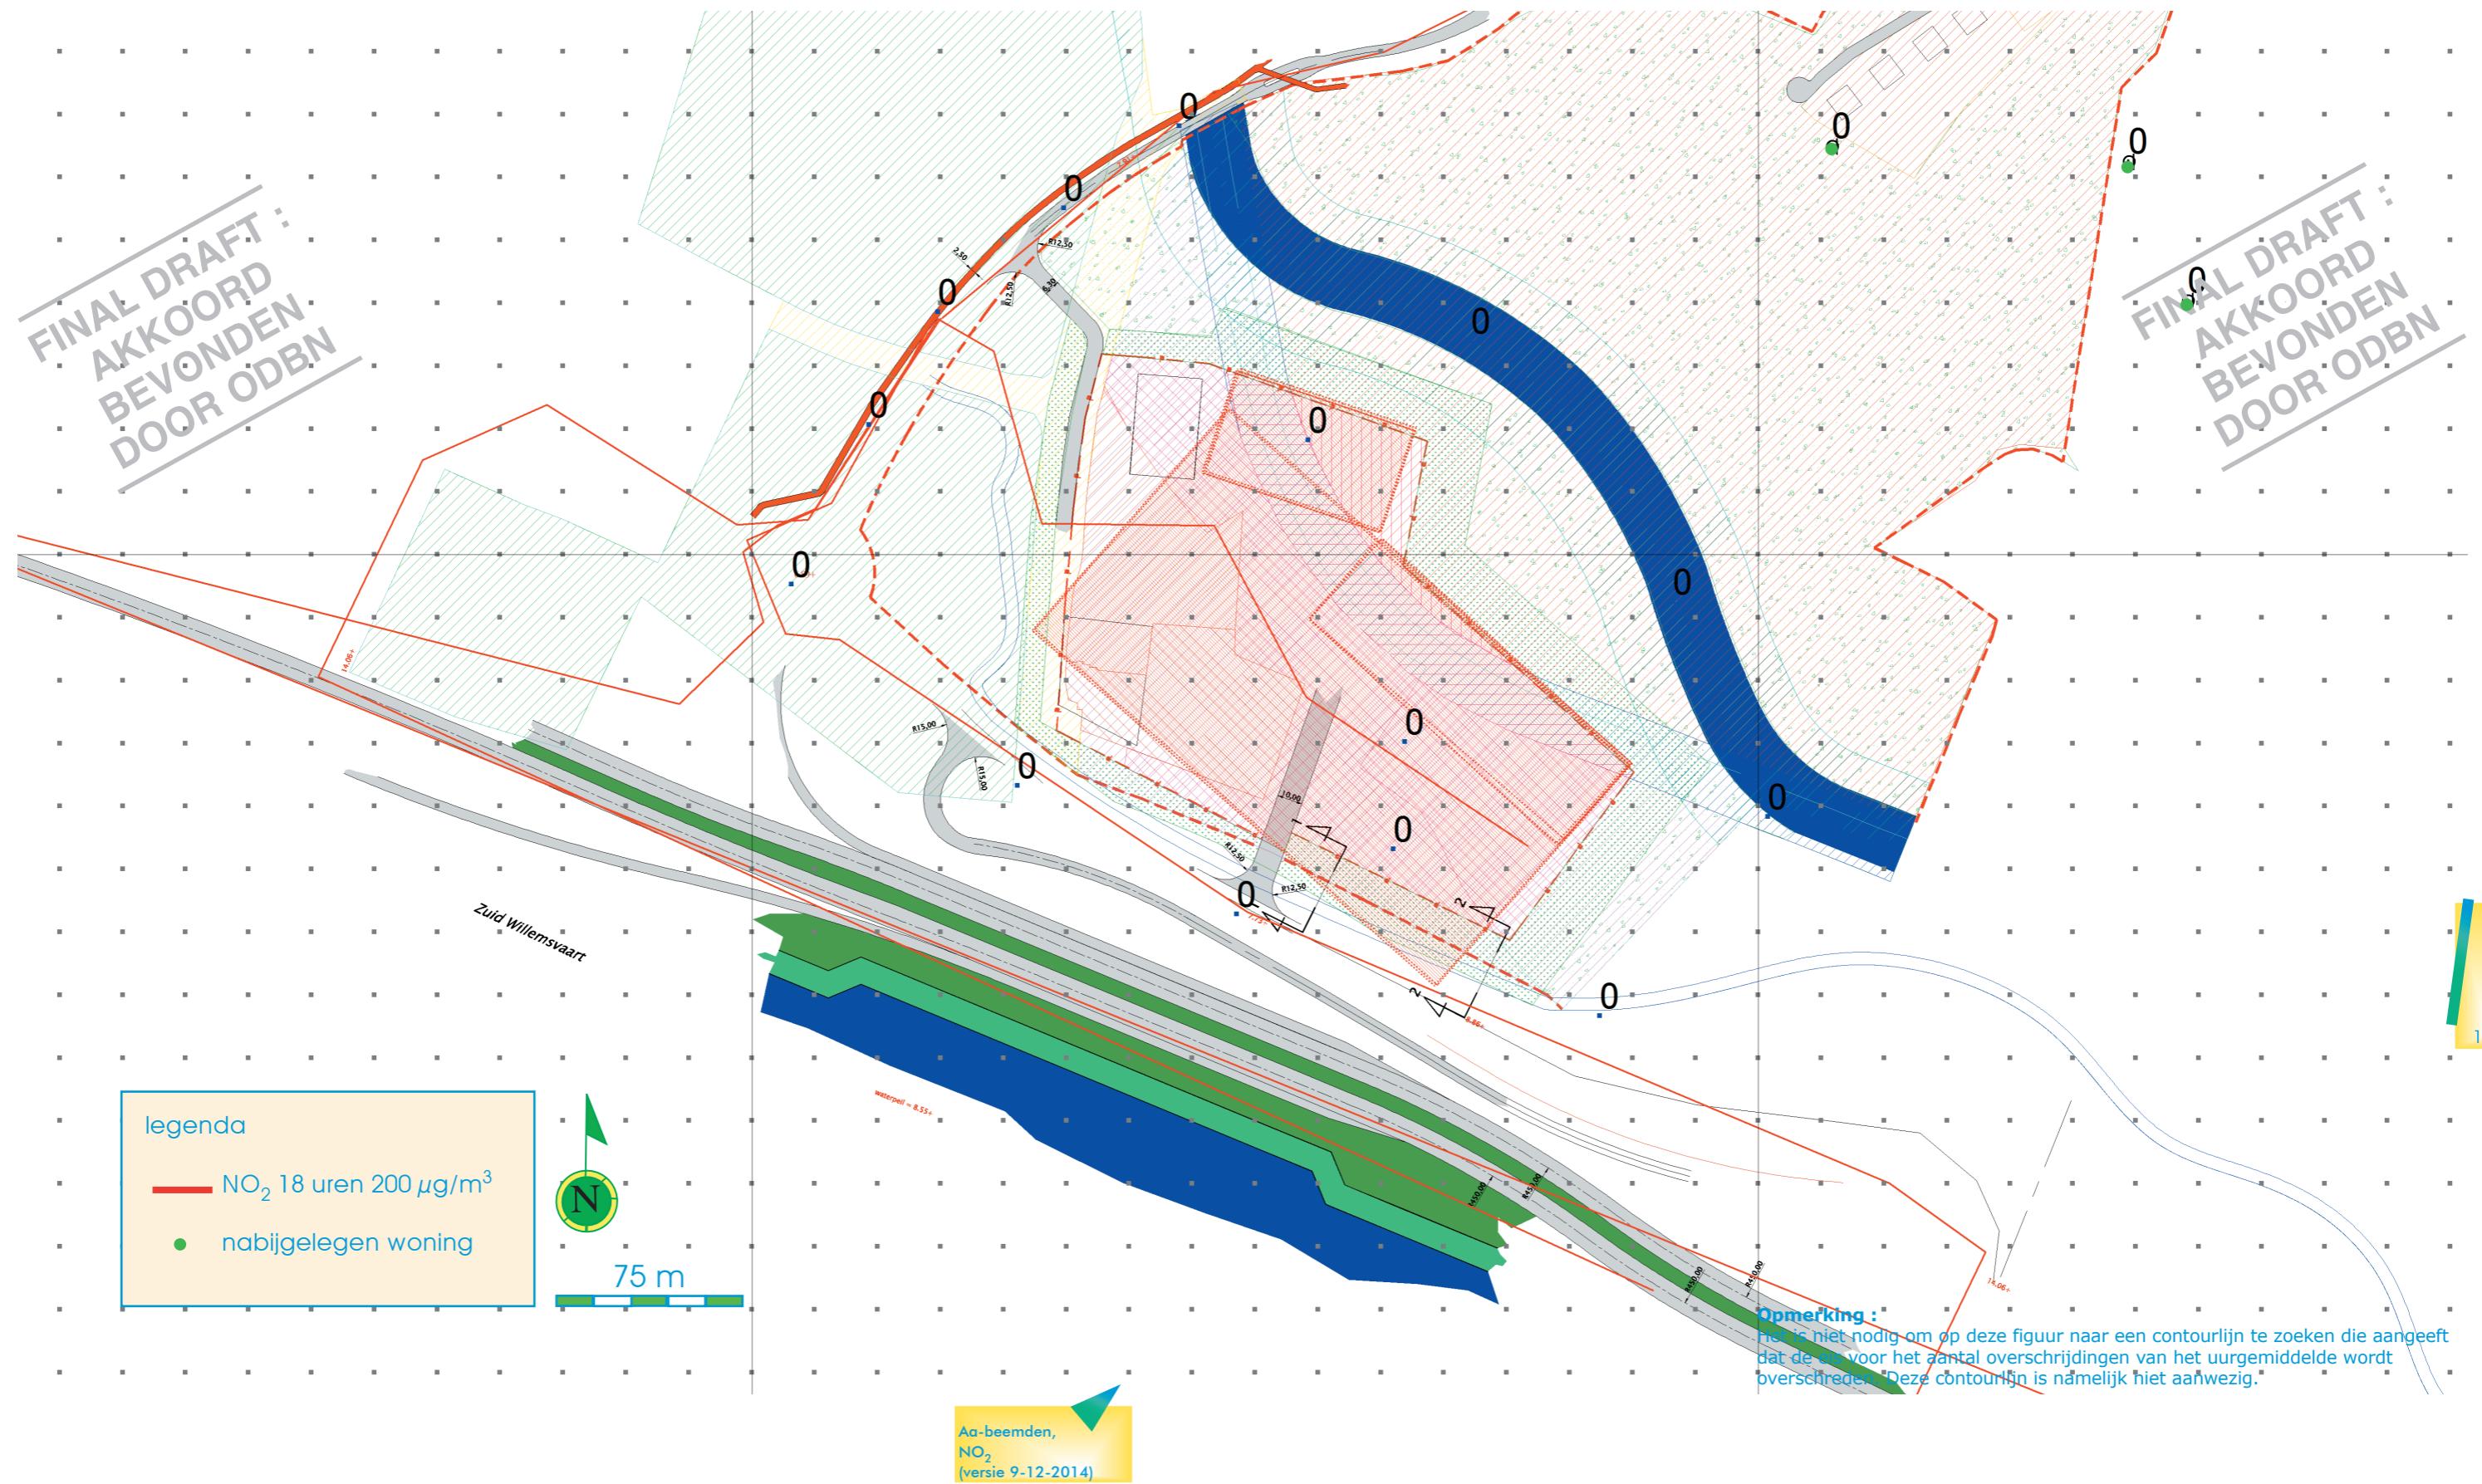

6.1

7

Conclusie

samenvatting

Door wijzigingen in materieel en brandstoffen ontstaat een verbetering ten opzichte van de vergunde situatie op het ogenblik van publicatie van het onderhavige rapport. De voorgenomen wijziging van de bedrijfsactiviteiten heeft voor wat betreft de emissie van NO₂ geen negatieve invloed op het milieu en de omgeving.

Door wijzigingen in materieel en brandstoffen ontstaat een verbetering ten opzichte van de vergunde situatie op het ogenblik van publicatie van het onderhavige rapport.

milieukundig

Uit de berekening van de immissie van NO₂ kan worden geconcludeerd dat de som van het ter plaatse heersende NO₂-achtergrondniveau en de bijdrage van de aangepaste activiteiten buiten de grenzen van de inrichting voldoet aan de NO₂-eisen die in de Wet milieubeheer zijn gesteld.

ruimtelijk

Ter plaatse van de dichtstbijzijnde woningen (Liekendonk 11 en Monseigneur van Oorschotlaan 29) ligt de berekende NO₂-concentratie ruim onder de eisen die in de Wet milieubeheer voor NO₂ worden gesteld. De jaargemiddelde concentratie NO₂ bedraagt op beide locaties 21 µg/m³. De eis voor het aantal overschrijdingssuren per jaar van het urgемiddelde van de waarde 200 µg/m³ wordt op geen enkel punt overschreden. Ook de anno 2014 geplande woningen ter hoogte van de Monseigneur van Oorschotlaan liggen buiten het gebied waar de eisen worden overschreden. De jaargemiddelde concentratie bedraagt daar 22 µg/m³.

te formuleren voorwaarden

Hierna volgen mogelijke voorwaarden die kunnen worden opgelegd in de vergunning ingevolge de Wet algemene bepalingen omgevingsrecht (Wabo) en/of de bestemmingsplanwijziging :

- snelheid op het terrein tot maximaal 10 km/u beperken;
- zo veel mogelijk AdBlue gebruiken; en
- nieuwe investeringen zoals transportmiddelen en installaties zoveel mogelijk elektrisch aangedreven.

Illustratie 5 :
Vergelijking contourlijnen jaarconcentratie NO₂ vigerende vergunning
(rood) en gewenste situatie (oranje, niet aanwezig)

Samenvatting

inleiding

De onderhavige verspreidingsberekening geeft een inzicht in de impact van de geplande activiteiten van Gebr. Dijkhoff bv op de aanwezigheid van het voor mens, flora en fauna schadelijke NO₂ (stikstofdioxide) in de omgevingslucht.

wetgeving en beleid

Volgens de Wet milieubeheer zijn twee grenswaarden relevant. De jaargemiddelde concentratie mag 40 µg/m³ niet overschrijden en het aantal overschrijdingen per jaar van het urgемiddelde van de waarde 200 µg/m³ mag niet hoger zijn dan 18 uren.

bedrijfssituatie

De bedrijfssituatie is uitvoerig beschreven in het rapport “NIMBY Heeswijkse Aa-beemden - Activiteiten” van Enviro Challenge.

bronbeschrijving

De NO₂-bronnen ten gevolge van de activiteiten worden gecombineerd met emissiekentallen om zo te komen tot NO₂-emissies. Het gaat met name over bewerken van afvalstoffen, overslag van materialen en verkeersbewegingen.

rekenmodel

De berekende NO₂-emissies worden ingevoerd in het verspreidingsmodel GeoMilieu, dat vervolgens de NO₂-immissie berekent.

rekenresultaten

Uit de “worst case”-verspreidingsberekening kan worden geconcludeerd dat noch de grenswaarde van de jaargemiddelde concentratie, noch de immissie-eis betreffende het aantal overschrijdingsuren op enig punt buiten de inrichting wordt overschreden.

conclusie

Door wijzigingen in materieel en brandstoffen ontstaat een verbetering ten opzichte van de vergunde situatie op het ogenblik van publicatie van het onderhavige rapport. De voorgenomen wijziging van de bedrijfsactiviteiten heeft voor wat betreft de emissie van NO₂ geen negatieve invloed op het milieu en de omgeving.

Dit document is met
Apple computers
ontwikkeld en
gedrukt op het papier
"Countryside mineraal,
zandsteen".

"Countryside mineraal,
zandsteen" bevat 75 %
secundaire papier-
grondstoffen. Verder
zijn secundair textiel en
mineralen toegevoegd.
Het is chloorarm papier.
